

BENZENE AND AROMATICITY

Naming the Benzenes

Structure and Resonance Energy of Benzene: A First Look at Aromaticity

Pi Molecular Orbitals of Benzene

Spectral Characteristics of the Benzene Ring

Polycyclic Aromatic Hydrocarbons

Other Cyclic Polyenes: Hückel's Rule

Hückel's Rule and Charged Molecules

Synthesis of Benzene Derivatives: Electrophilic Aromatic Substitution

Halogenation of Benzene: The Need for a Catalyst

Nitration and Sulfonation of Benzene

Friedel-Crafts Alkylation

Limitations of Friedel-Crafts Alkylations

Friedel-Crafts Acylation (Alkanoylation)

ELECTROPHILIC ATTACK ON DERIVATIVES OF BENZENE

Activation or Deactivation by Substituents on a Benzene Ring

Directing Electron-Donating Effects of Alkyl Groups

Directing Effects of Substituents in Conjugation with the Benzene Ring

Electrophilic Attack on Disubstituted Benzenes

Synthetic Strategies Toward Substituted Benzenes

Reactivity of Polycyclic Benzenoid Hydrocarbons

Polycyclic Aromatic Hydrocarbons and Cancer

CHEMISTRY OF BENZENE SUBSTITUENTS

Reactivity at the Phenylmethyl (Benzyl) Carbon: Benzylic Resonance Stabilization

Benzylic Oxidations and Reductions

Names and Properties of Phenols

Preparation of Phenols: Nucleophilic Aromatic Substitution

Alcohol Chemistry of Phenols

Electrophilic Substitution of Phenols

An Electrocyclic Reaction of the Benzene Ring: The Claisen Rearrangement

Oxidation of Phenols: Benzoquinones

Oxidation-Reduction Processes in Nature

AMINES AND THEIR DERIVATIVES

Naming the Amines

Structural and Physical Properties of Amines

Acidity and Basicity of Amines

Synthesis of Amines by Alkylation

Synthesis of Amines by Reductive Amination
Synthesis of Amines from Carboxylic Amides
Reactions of Quaternary Ammonium Salts: Hofmann Elimination
Mannich Reaction: Alkylation of Enols by Iminium Ions
Nitrosation of Amines
Arenediazonium Salts
Electrophilic Substitution with Arenediazonium Salts: Diazo Coupling

ALDEHYDES AND KETONES

Naming the Aldehydes and Ketones
Structure of the Carbonyl Group
Preparation of Aldehydes and Ketones
Reactivity of the Carbonyl Group: Mechanisms of Addition
Addition of Water to Form Hydrates
Addition of Alcohols to Form Hemiacetals and Acetals
Acetals as Protecting Groups
Nucleophilic Addition of Ammonia and Its Derivatives
Deoxygenation of the Carbonyl Group
Addition of Hydrogen Cyanide to Give Cyanohydrins
Addition of Phosphorus Ylides: The Wittig Reaction
Oxidation by Peroxycarboxylic Acids: The Baeyer-Villiger Oxidation
Oxidative Chemical Tests for Aldehydes

ENOLS, ENOLATES, AND THE ALDOL CONDENSATION

Acidity of Aldehydes and Ketones: Enolate Ions
Keto–Enol Equilibria
Halogenation of Aldehydes and Ketones
Alkylation of Aldehydes and Ketones
Attack by Enolates on the Carbonyl Function: Aldol Condensation
Crossed Aldol Condensation
Properties of α,β -Unsaturated Aldehydes and Ketones
Conjugate Additions to α,β -Unsaturated Aldehydes and Ketones
1,2- and 1,4-Additions of Organometallic Reagents
Conjugate Additions of Enolate Ions: Michael
Addition and Robinson Annulation

CARBOXYLIC ACIDS

Naming the Carboxylic Acids
Structural and Physical Properties of Carboxylic Acids
Acidic and Basic Character of Carboxylic Acids
Carboxylic Acid Synthesis in Industry
Methods for Introducing the Carboxy Functional Group

Substitution at the Carboxy Carbon: The Addition–Elimination Mechanism
Carboxylic Acid Derivatives: Acyl Halides and Anhydrides
Carboxylic Acid Derivatives: Esters
Carboxylic Acid Derivatives: Amides
Reduction of Carboxylic Acids by Lithium Aluminum Hydride
Bromination Next to the Carboxy Group: The Hell-Volhard-Zelinsky Reaction
Biological Activity of Carboxylic Acids

CARBOXYLIC ACID DERIVATIVES

Relative Reactivities, Structures, and Spectra of Carboxylic Acid Derivatives
Chemistry of Acyl Halides
Chemistry of Carboxylic Anhydrides
Chemistry of Esters
Esters in Nature: Waxes, Fats, Oils, and Lipids
Amides: The Least Reactive Carboxylic Acid Derivatives
Amidates and Their Halogenation: The Hofmann Rearrangement
Alkanenitriles: A Special Class of Carboxylic Acid Derivatives

ESTER ENOLATES AND THE CLAISEN CONDENSATION

β -Dicarbonyl Compounds: Claisen Condensations
 β -Dicarbonyl Compounds as Synthetic Intermediates
 β -Dicarbonyl Anion Chemistry: Michael Additions
Acyl Anion Equivalents: Preparation of α -Hydroxyketones

HETEROCYCLES

Naming the Heterocycles
Nonaromatic Heterocycles
